pL-Store® Foodline

THE LEADING STANDARD SOLUTION FOR WAREHOUSE MANAGEMENT

...IN THE AREAS OF FOOD WHOLESALE
AND FOR THE BEVERAGE INDUSTRY

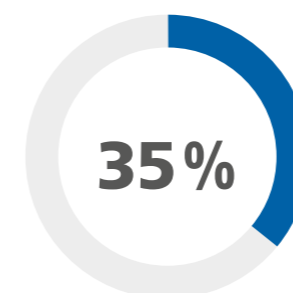

proLogistik is developing hard- and software solutions for all warehouse processes. The pL-Store® Foodline warehouse management system was developed from decades of experience and cooperation with renowned companies from the industry. Optimal management of the material flows (storage, retrieval, and relocation) in a warehouse is the basic prerequisite for any working business operation.

With pL-Store® Foodline, we offer a comprehensive warehouse management software for your industry! We are ERP-independent and can interface our system to any super-ordinate system.

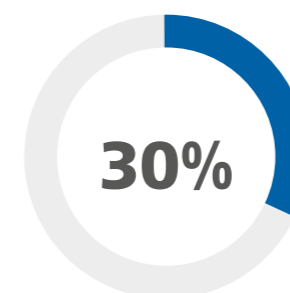

YOUR ADVANTAGES

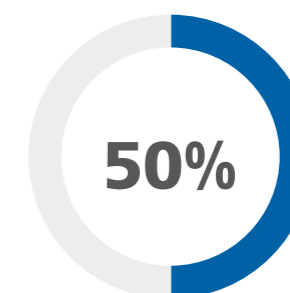

- Best-before-date handling (compliance with remaining terms)
- Inventory-safety & delivery compliance
- Quality review in inbound
- Multiple-storage and client capability
- Optimisation of material flows
- Connection of fully automatic warehouse systems

TIME SAVING

LESS EFFORT
IN PICKING

HIGHER PICKING
PERFORMANCE

Precisely fitting modules

SPECIFICALLY FOR FOOD & BEVERAGE LOGISTICS

FRESH & FROZEN

- Weight handling
- Fast turnover method

- Loading control
- Quality assurance

FRUITS & VEGETABLES

- Spare items
- IFCO bin handling
- Flexible picking management
- Provisions

BEVERAGES

- Yard management
- Dynamic block storage
- In-house beverage handling
- Production supply & disposal
- Single bottle picking

Efficient intralogistics

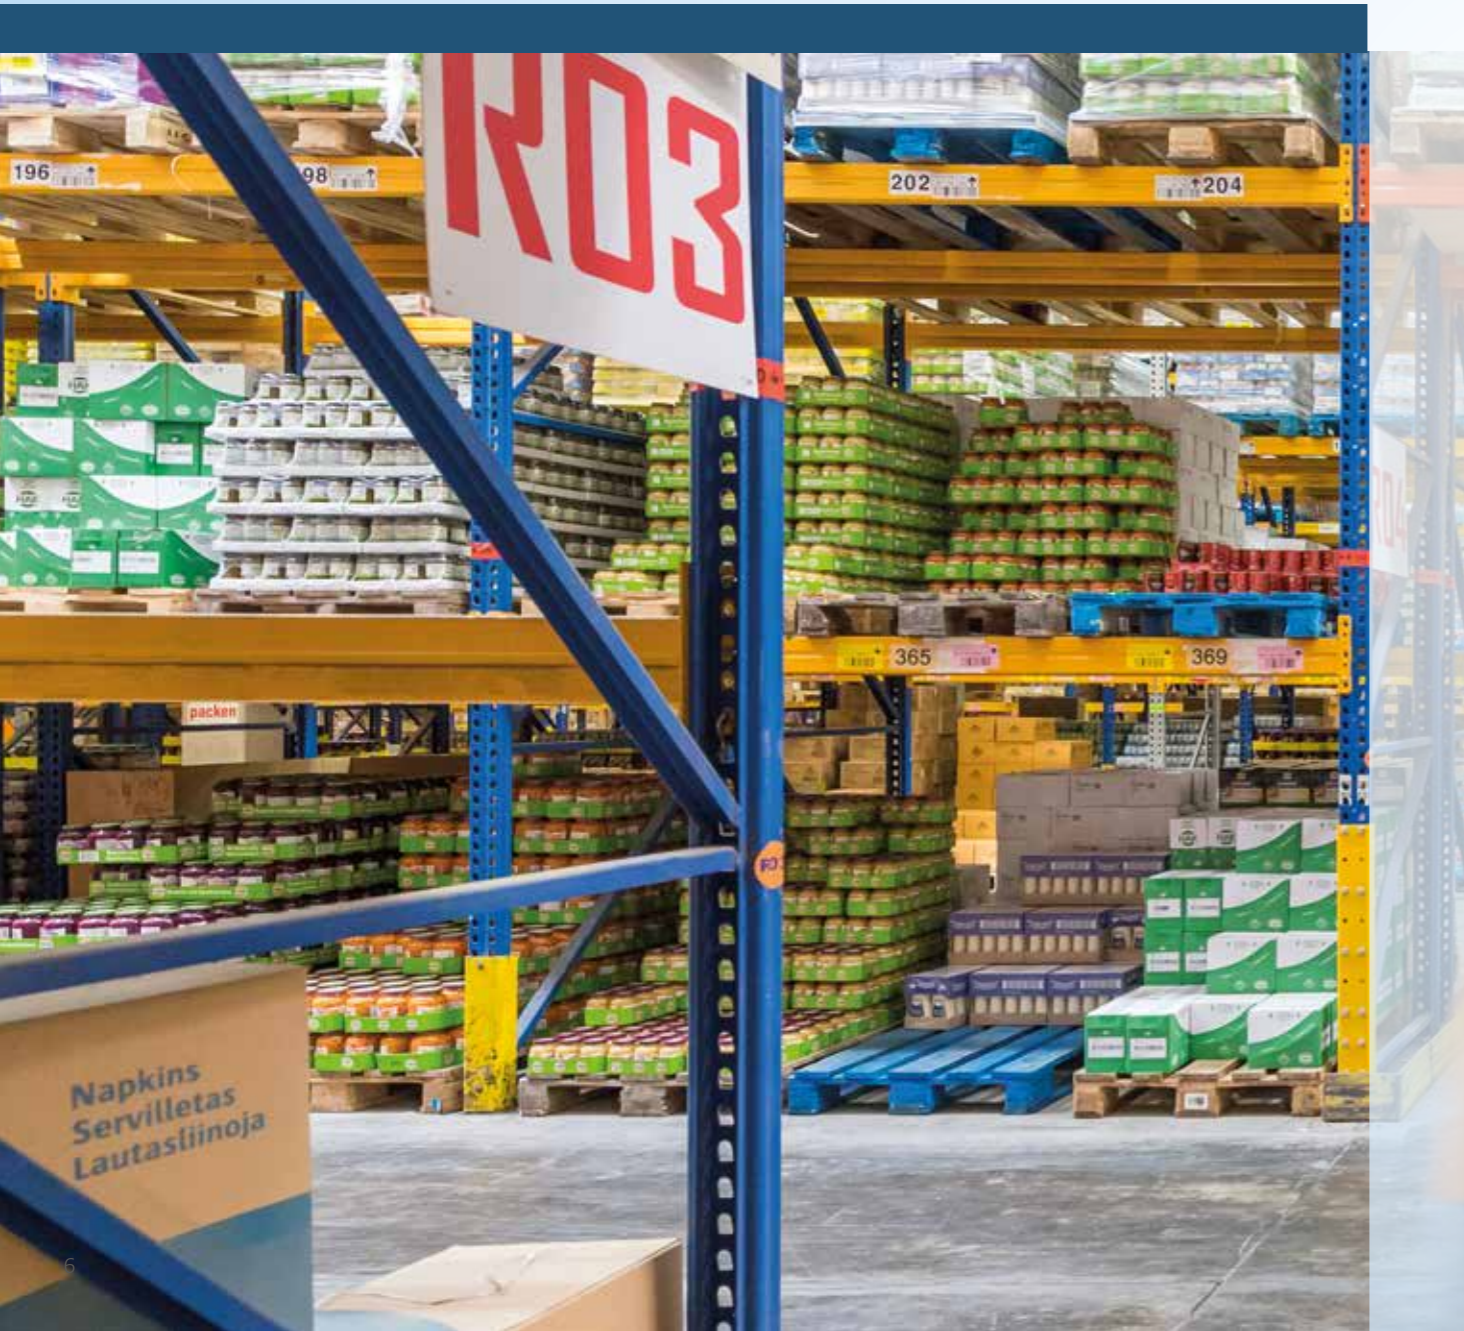

HIGHLIGHTS IN WAREHOUSE MANAGEMENT

ITEM HANDLING BY WEIGHT

Items by weight are an important element in the pL-Store® Foodline. Items are often managed on unit basis but invoiced to the customer by kilogram. Other items, such as apples or bananas, are only managed in kilograms. Our function for “item handling by weight” can process both versions optimally.

BATCH MANAGEMENT

The batch management in the pL-Store® Foodline will track your batches seamlessly throughout the process chain. We offer multiple options for this. The batch can be transferred by interface from your merchandise management system or specified in the query in goods receipt.

BEST-BEFORE DATE

Our best-before date function lets you enter the BBDs right at the article, permitting seamless quality inspection of the articles. You can also sort the articles by best-before date right at goods receipt.

PALLET MANAGEMENT/LHE MANAGEMENT

Our handling unit equipment functions (in short: HU) will improve your management of pallets and other load handling equipment. In- and outbound handling units will be recorded and managed directly in the system, increasing transparency and trackability of your pallets.

MULTI-CLIENT CAPABILITY

Are you managing inventories from different clients/customers in your warehouse? Our client function will help you with them. The pL-Store® Foodline lets you manage and control your inventories customer-specific.

SHOP CONNECTION

Do you have your own cash and carry market, where customers are independently supplied with items? Our shop connection records the inventory-managed goods at the checkout and hands over the corresponding orders via an interface. Then the goods are booked out of the market inventories.

VOLUME CALCULATION

Avoid costs and lack of utilization of your handling unit equipment during transport! Our volume calculation will select the matching handling unit equipment in advance. Our system uses the data stored with the article (length, width, height, weight) to determine the volume and suggest a matching handling unit.

SPECIAL CUSTOMER ORDERS

The procedure of special customer orders applies automatically when pL-Store® Foodline receives a corresponding customer order in the goods in position. This reserves the goods for that customer order, to be picked only when the customer order for that inventory is submitted.

Additional functions

PRACTICAL HIGHLIGHTS FOR THE BEVERAGE AREA

Beverage wholesale and the industry are increasingly facing digitalisation and rapid developments in logistics.

Seasonal beverage demand leads to varying order and picking numbers. A flexible warehouse management solution able to react quickly to fluctuations in the orders and logistics processes is all the more important. Our pL-Store® warehouse management system offers precisely fitting special functions in order to render your intralogistics more efficient and simpler.

REQUIREMENTS IN THE BEVERAGE INDUSTRY

- Fluctuating customer demand
- Varying order & picking numbers
- Various packaging types
- Empties handling
- Many articles
- Various packaging units
- In-house beverage handling

WMS-HIGHLIGHTS FOR BEVERAGE TRADE

- Collective putaway
- Multiple transports
- Dynamic block location handling (capacity-controlled)
