DIVERSE
AND COMPETENT

pL-Store® Techline

THE LEADING STANDARD SOLUTION FOR WAREHOUSE MANAGEMENT

...IN THE AREAS OF BUILDING MATERIALS, SANITARY, AND TECHNICAL WHOLESALE

We developed the special pL-Store® Techline solution from our many years of experience and cooperation with our customers from the industry. The warehouse management software pL-Store Techline offers our typical standard modules, supplemented by integrated industry functions for the areas of building materials, sanitary and technical wholesale products.

Create transparency and efficiency with our high-performance pL-Store® Techline warehouse management software.

With pL-Store® Techline, we offer a comprehensive warehouse management software for your industry! We are ERP-independent and can connect our system to any merchandise management system.

YOUR ADVANTAGES

▮ Inventory safety & delivery compliance
▮ Increase of the picking performance
▮ Quality review in inbound goods
▮ Multiple-storage and client capability
▮ Optimisation of material flows
▮ Connection of fully automatic warehouse systems

„Introducing the pL-Store Techline warehouse management system reduced the error rate in picking and shortened the average throughput times. The efficient online inventory management has increased information security – both in light of inbound orders and during on-site sale at the counter."

Udo Bach
Managing Director M.Bach GmbH

Precisely Fitting Modules
SPECIFICALLY FOR

GOODS RECEIPT
▌ DESADV goods receipt support
▌ Detailed goods in crossdock
▌ Mobile detailed goods in SSCC
▌ Inbound goods

EXTERNAL WAREHOUSE

▌ Direct mobile booking of goods

CUSTOMER COUNTER
▌ The employee at the counter
  decides about the picking process
▌ Priority control
▌ Freestyle picking
▌ Flexibility

OTHER FUNCTIONS
▌ Online inventory management
▌ Chaotic and fixed location management
▌ Permanent and key-date inventory
▌ Barcode control

Efficient Intralogistics
HIGHLIGHTS
IN WAREHOUSE MANAGEMENT

SERIAL NUMBERS

Do you want to identify and map your products in real time? Mapping the serial number is an important element in pL-Store® Techline. During picking, the employee is asked to enter the article serial number. This secures tracking of the serial numbers used for the customer at all times.

BATCH MANAGEMENT

Are you looking for optimised batch management? The batch management in the pL-Store® Techline will track your batches seamlessly throughout the process chain. We offer multiple options for this. The batch can be transferred by interface from your merchandise management system or specified in the query in goods receipt.

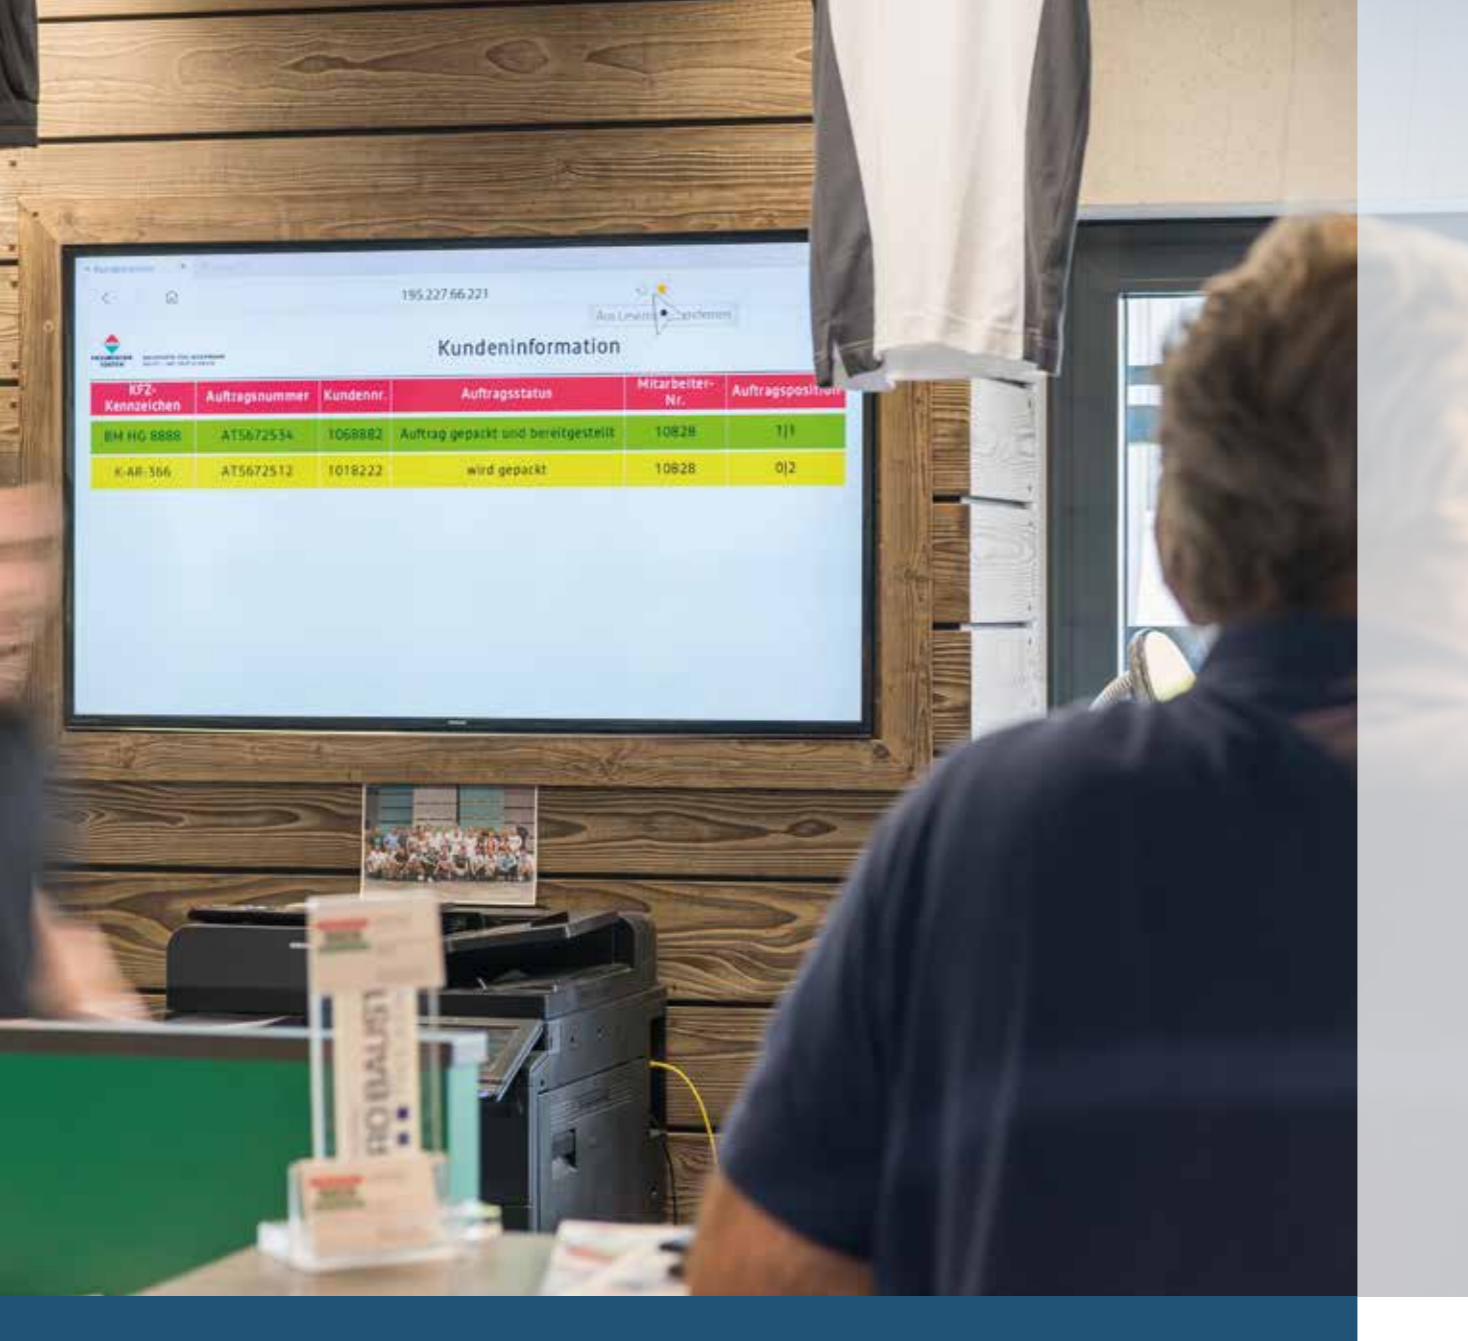

BEST-BEFORE DATE

Our best-before date function lets you enter the best-before dates right at the article, permitting seamless quality inspection of the items. You can also sort the items by best-before date right at goods receipt.

PALLET MANAGEMENT/HU MANAGEMENT

Our handling unit functions (in short: HU) will improve your management of pallets and other load handling equipment. In- and outbound load handling equipment will be recorded and managed directly in the system, increasing transparency and trackability of your pallets.

CLIENT CAPACITY

Are you managing inventories from different clients/customers in your warehouse? Our client function will help you with them. The pL-Store® Techline lets you manage and control your inventories customer-specifically.

COUNTER PROCESSING

Do you have a dedicated counter sale? Our counter processing lets you perform the customer's order simply and quickly on site. The order is recorded in the merchandise management system, transferred to the pL-Store® Techline via an interface, and then approved for picking. You can also set priorities for orders and inform the warehouse employees of them right away.

VOLUME CALCULATION

Do you want to minimise costs and lack of utilisation of your load handling equipment during transport? Our volume calculation will select the matching load handling equipment in advance. Our system uses the data stored with the item (length, width, height, weight) to determine the volume and suggest a matching handling unit.

HAZARDOUS GOODS

Do you need to store hazardous goods safely? Our warehouse management system has space to enter thresholds for the total weight of hazardous substances. As a result, a check will be conducted before every putaway process to determine the optimal storage location for the hazardous goods. It is also possible to draw up relevant hazardous substance statistics (e.g. hazardous substance inventory, delivered inventory).

RENTAL DRUM

Are you managing cable drums? Construction sites are, for example, supplied with disposable and rental drums alike. Our rental drum function will record the rental drums right at goods receipt, applying additional properties so that the subsequent processes can be adjusted to company wishes.
